## Contents

I Fourier Transform  
R. Zorn

II Basic Assumptions of Quantum Mechanics and the Born Approximation – A Brief Tutorial  
D. Richter

III Symmetry in Crystals  
G. Heger

1 Neutron Sources  
A. Ioffe

2 A neutron primer: Elastic scattering and the properties of the neutron  
Th. Brückel

3 Polarized neutron scattering  
W. Schweika

4 Correlation Functions Measured by Scattering Experiments  
R. Zom, D. Richter

5 Continuum Description:  
G. Heger

Grazing Incidence Neutron Scattering  
E. Kentzinger

7 Diffractometer  
G. Heger

8 Small-Angle Scattering  
H. Frielinghaus

9 Inelastic Crystal Spectrometers  
J. Wuttke

10 Time-of-flight spectrometers including NSE  
M. Monkenbusch

11 Structure determination  
G. Heger

12 Inelastic neutron scattering: phonons and magnons  
M. Braden

13 Structure of Complex Fluids and Macromolecules  
H. Frielinghaus

14 Polymer Dynamics  
D. Richter

15 Magnetism  
Th. Brückel
