Development of thin film inorganic membranes for oxygen separation

Hyo Jeong Moon
Table of Contents

List of figures ......................................................................................................................... III
List of tables ............................................................................................................................ IX
List of abbreviations ................................................................................................................ X
List of symbols ........................................................................................................................ XII

1 Introduction .......................................................................................................................... 1
   1.1 CO₂ capture in fossil power plants ............................................................................. 1
   1.2 Gas separation membranes for CCS ................................................................. 2
   1.3 Objective of this work ......................................................................................... 3

2 Fundamentals and background .............................................................................................. 4
   2.1 Mixed ionic-electronic conducting membranes for O₂/N₂ separation ..................... 4
   2.1.1 Fluorite-structured CGO (Ce₀.₈Gd₀.₂O₂₋₄) membrane ........................................ 6
   2.1.2 Perovskite-structured LSCF (La₀.₅Sr₀.₅Co₀.₂Fe₀.₈O₃₋₋₄) membrane ..................... 7
   2.2 Asymmetric thin film membranes ......................................................................... 9
   2.3 Wet chemical deposition ..................................................................................... 12
   2.3.1 Stabilization of dispersion ............................................................................. 12
   2.3.2 Spin-/dip-coating ....................................................................................... 13
   2.3.3 Heat treatment of coating layer .................................................................... 16
   2.4 Physical vapour deposition ................................................................................ 17
   2.4.1 DC-Sputtering ......................................................................................... 17
   2.4.2 Magnetron Sputtering ............................................................................. 17
   2.4.3 Reactive sputtering ................................................................................. 18
   2.4.4 Film Morphology ................................................................................... 18

3 Experimental methods ........................................................................................................... 20
   3.1 Ceramic substrate preparation ........................................................................... 20
   3.2 Membrane manufacturing ................................................................................ 22
   3.2.1 Manufacture of inorganic membrane by wet chemical deposition ................... 22
   3.2.2 Manufacture of inorganic membrane by physical vapour deposition ............... 26
   3.3 Characterization methods .................................................................................. 29
   3.3.1 Mercury porosimetry ............................................................................... 29
   3.3.2 Zeta-potential ........................................................................................ 29
   3.3.3 Particle size analysis .............................................................................. 29
   3.3.4 Thermal analysis (TG/DTA) ............................................................... 30
