Full-waveform inversion of surface ground penetrating radar data and coupled hydrogeophysical inversion for soil hydraulic property estimation

Sebastian Busch
Full-waveform inversion of surface ground penetrating radar data and coupled hydrogeophysical inversion for soil hydraulic property estimation

Sebastian Busch
# Table of Contents

Chapter 1  Introduction

1.1 Research Topic

1.2 Thesis objectives and outline

Chapter 2  Theory

2.1 Maxwell’s equations

2.1.1 Electromagnetic properties in earth materials

2.1.2 Electromagnetic field in homogeneous space

2.1.3 Electromagnetic field in a homogeneous halfspace

2.2 Exact-field electromagnetic forward model

Chapter 3  Quantitative conductivity and permittivity estimation using full-waveform inversion of surface GPR data

3.1 Full-waveform inversion methodology

3.1.1 Starting model estimation using far-field forward model

3.1.2 Exact forward modeling

3.1.3 Source wavelet estimation

3.1.4 Full-waveform inversion

3.2 Application to synthetic data

3.3 Application to measured data

3.4 Conclusions

Chapter 4  Improved characterization of fine texture soils using surface GPR full-waveform inversion

4.1 Combined analysis of the soil properties

4.1.1 Selhausen test site

4.1.2 Measurement setup

4.2 Results and discussion

4.2.1 ERT and EMI inversion

4.2.2 GPR full-waveform inversion

4.3 Conclusions

Chapter 5  Coupled hydrogeophysical inversion of time-lapse surface GPR data to estimate hydraulic properties of a layered subsurface

5.1 Methodology

5.1.1 Test site

5.1.2 Interval velocity and depth model estimation from GPR data

5.1.3 Hydrological model with film flow

5.1.4 Conversion of soil water content into interval velocities and travel times
Table of Contents

5.1.5 Coupled inversion for hydraulic properties ........................................ 55
5.2 Application to synthetic data ..................................................................... 56
5.3 Application to field data ........................................................................... 60
5.4 Conclusions ............................................................................................... 68

Chapter 6 Conclusions and Outlook .......................................................... 71
6.1 Surface GPR full-waveform inversion ....................................................... 71
6.2 Coupled inversion of time-lapse surface GPR data ............................... 73
6.3 Outlook ...................................................................................................... 74

Appendix A Chlorides and moisture assessment in concrete by off-ground
GPR full-waveform inversion* ........................................................................ 77
A.1 Basics of steel corrosion due to the presence of chlorides .................. 77
A.2 Experimental setup .................................................................................. 78
A.3 Forward model .......................................................................................... 80
A.4 GPR system characterization ................................................................... 81
A.5 Full-waveform inversion methodology .................................................... 84
A.6 Full-waveform inversion results ................................................................. 87
A.7 Conclusions ............................................................................................... 89

Appendix B ..................................................................................................... 91
A.8 List of Figures ........................................................................................... 91
A.9 List of Tables ........................................................................................... 96

Appendix C ..................................................................................................... 97
A.10 List of Publications ................................................................................... 97
A.11 International Conferences and Workshops ............................................. 98
A.12 About the Author .................................................................................... 100

Bibliography .................................................................................................. 101

Acknowledgement .......................................................................................... 111
