Interplay between Magnetism and Superconductivity in Iron Based High Temperature Superconductors

Stephen Price
Interplay between Magnetism and Superconductivity in Iron Based High Temperature Superconductors

Stephen Price
Contents

1 Introduction

2 Introduction to Superconducting Materials
   2.1 Conventional Superconductivity : BCS-Materials
   2.2 High $T_c$ Superconductivity in Cuprate Materials
      2.2.1 Discovery of High $T_c$ Superconductivity
      2.2.2 Magnetism and Superconductivity
   2.3 High $T_c$ Superconductivity in Fe-based Materials
      2.3.1 Structural Properties
      2.3.2 The Phase Diagrams
      2.3.3 Magnetic Properties
      2.3.4 Band Structure and Fermiology
      2.3.5 Superconducting Gap Symmetry
      2.3.6 The Spin Resonance Mode

3 Experimental and Theoretical Basics
   3.1 Scattering Basics
      3.1.1 Basic Neutron Scattering Formulas
      3.1.2 The Fluctuation-Dissipation Theorem
      3.1.3 Longitudinal Polarization Analysis
   3.2 Neutron Scattering Instruments
      3.2.1 The Three Axis Spectrometer
      3.2.2 The Time of Flight Neutron Spectrometer

4 Effect of P- and Co-Doping on the Eu$^{2+}$ Magnetic Sublattice in EuFe$_2$As$_2$
   4.1 Introduction
   4.1.1 Motivation
   4.1.2 Nuclear and Magnetic Structure of Undoped EuFe$_2$As$_2$
   4.1.3 Pressure Induced Superconductivity in EuFe$_2$As$_2$
   4.1.4 Doping Induced Superconductivity in EuFe$_2$As$_2$
   4.2 Experimental Details
   4.3 Results and Discussion
      4.3.1 Magnetic Structure of EuFe$_2$(As$_{1-x}$P$_x$)$_2$ $x=0.05$, $x=0.15$
      4.3.2 Magnetic Structure of Eu(Fe$_{1-x}$Co$_x$)$_2$As$_2$ $x=0.014$, $x=0.025$
