STM-based quantum transport through molecular wires

Norman Fournier
STM-based quantum transport through molecular wires

Norman Fournier
# Contents

1 **Introduction**  

2 **Experimental methods**  
   2.1 Introduction  
   2.2 Scanning tunneling microscopy
      2.2.1 The tunneling effect  
      2.2.2 Bardeen’s theory  
      2.2.3 Tersoff-Hamann theory  
      2.2.4 The scanning tunneling microscope  
      2.2.5 Preparation of the tip  
      2.2.6 Imaging and manipulation of single molecules with STM  
   2.3 Scanning tunneling spectroscopy
      2.3.1 Working principle of the STS  
      2.3.2 Spectroscopy at bare metal surfaces  
      2.3.3 Electron-vibration coupling in STS  
      2.3.4 The lock-in amplifier  
      2.3.5 Calibration of the lock-in amplifier  
   2.4 Noncontact atomic force microscopy  
      2.4.1 Working principle of the AFM  
      2.4.2 Controlling the junction with the AFM  
   2.5 Sample preparation
      2.5.1 Preparation of the crystals  
      2.5.2 Deposition of the molecules  
      2.5.3 The molecular islands  

3 **Theory of transport**  
   3.1 Introduction  
   3.2 Ballistic transport
      3.2.1 Landauer formula  
      3.2.2 Transmission probability  
   3.3 Molecule in a vacuum junction
      3.3.1 Coherent resonant tunneling in a double-barrier  
      3.3.2 Incoherent tunneling  
      3.3.2.1 Resonant current  

vii
3.3.2.2 Off-resonant current ........................................... 48
3.4 Molecular vibrations .............................................. 53
3.5 The Kondo effect .................................................. 54
3.6 Conclusions ........................................................ 56

4 Electronic structure of π-conjugated molecules ................. 57
  4.1 Introduction ...................................................... 57
  4.2 Electronic structure of the seven systems .................... 59
    4.2.1 Electronic structure of the Ag(111) systems .......... 59
    4.2.2 Electronic structure of the Au(111) systems ....... 62
  4.3 Investigation of NTCDA on Ag(111) .......................... 67
  4.4 Geometric and electronic structure of NTCDA on Ag(111) .... 69
    4.4.1 The commensurate phase ............................... 69
    4.4.2 The incommensurate phase .............................. 73
    4.4.3 The compressed phase .................................... 75
  4.5 Mapping the electronic structure within a molecule ....... 76
    4.5.1 Electronic structure within a type A molecule ...... 77
    4.5.2 Electronic structure within a type B molecule ..... 86
  4.6 Temperature dependence of the Kondo resonance ............ 88
    4.6.1 Temperature dependence of the peak height .......... 89
    4.6.2 Temperature dependence of the peak width .......... 89
  4.7 Differential conductance map of NTCDA on Ag(111) .......... 93
  4.8 Conclusions ...................................................... 100

5 Highly reproducible lifting of π-conjugated molecules ........ 103
  5.1 Force-controlled lifting of molecular wires ................ 105
  5.2 Measurement of the Binding Energies of the Organic-Metal Perylene-Teracarboxylic-Dianhydride/Au(111) Bonds by Molecular Manipulation Using an Atomic Force Microscope ........ 111

6 Systematic study of transport through a homologous series of π-conjugated molecules ........................................... 117
  6.1 Introduction ...................................................... 117
  6.2 Transport measurements on single molecules ................ 118
    6.2.1 Measurement routine ..................................... 118
    6.2.2 Highly reproducible measurement ....................... 119
  6.3 Processing the data ............................................ 123
    6.3.1 Sorting the data by classes ............................ 123
    6.3.2 Aligning the individual curves within class B ....... 130
    6.3.3 Finding a curve which represents an individual system best ........ 135
      6.3.3.1 Class A: Determine a generic curve .......... 135
