High resolution imaging and modeling of aquifer structure

Nils Güting
High resolution imaging and modeling of aquifer structure

Nils Güting
CONTENTS

ABSTRACT v

ZUSAMMENFASSUNG vii

1 INTRODUCTION 1
1.1 Statement of the problem .............................................. 1
1.2 The need to account for spatial connectivity ..................... 2
1.3 Multiple-point statistics and training images ..................... 3
1.4 Benefits and drawbacks of geophysical imaging .................. 5
1.5 Objectives and thesis outline ........................................ 6

2 HIGH RESOLUTION IMAGING OF AQUIFER STRUCTURE USING CROSSHOLE GPR
   FULL-WAVEFORM INVERSION 9
2.1 Introduction .................................................................. 9
2.2 Material and methods .................................................. 11
   2.2.1 Study site .................................................................. 11
   2.2.2 Crosshole ground penetrating radar tomography ............. 13
   2.2.3 Complex Refractive Index Model (CRIM) ...................... 15
   2.2.4 Cone penetration tests .............................................. 16
   2.2.5 Hydraulic conductivity from flowmeter test and grain size ... 16
   2.2.6 Cluster analysis ...................................................... 17
2.3 Results and discussion .................................................. 18
   2.3.1 GPR inversion results and comparison with CPT data ......... 18
   2.3.2 Cluster analysis of GPR and CPT data .......................... 24
2.4 Conclusions .............................................................. 33

3 THE BENEFIT OF GPR FULL-WAVEFORM INVERSION FOR HYDROGEOLOGICAL SITE
   CHARACTERIZATION 35
3.1 Introduction ............................................................... 35
3.2 Material and methods .................................................. 38
   3.2.1 Study site ............................................................... 38
   3.2.2 Crosshole ground penetrating radar (GPR) tomography ...... 38
   3.2.3 Complex refractive index model (CRIM) ....................... 40
   3.2.4 Logistic regression .................................................... 41
   3.2.5 Direct-push hydraulic measurements ........................... 42
   3.2.6 Previous studies at the Krauthausen site ........................ 43
3.3 Results and discussion .................................................. 46
   3.3.1 GPR full-waveform inversion results ............................ 46
   3.3.2 Comparison of GPR full-waveform inversion results with CPT neu-
        tron and electrical resistivity logs .................................... 49
High resolution imaging and modeling of aquifer structure
