Many-Body Methods for Real Materials

Autumn School organized by
the Institute for Advanced Simulation
at Forschungszentrum Jülich
16 – 20 September 2019
## Contents

**Preface**

1. Introduction to Density Functional Theory
   *Xavier Blase*

2. The Random Phase Approximation and its Applications to Real Materials
   *Xinguo Ren*

3. Introduction to Variational and Projector Monte Carlo
   *Cyrus Umrigar*

4. Optimized Quantum Monte Carlo Wave Functions
   *Arne Lüchow*

5. Variational Wave Functions for Strongly Correlated Fermionic Systems
   *Federico Becca*

6. Auxiliary-Field Quantum Monte Carlo at Zero- and Finite-Temperature
   *Shiwei Zhang*

7. Exact Diagonalization and Lanczos Method
   *Erik Koch*

8. Quantum Chemistry DMRG in a Local Basis
   *Miles Stoudenmire*

9. Density Matrix Renormalization
   *Karen Hallberg*

10. Dynamical Mean-Field Theory and the Mott Transition
    *Marcelo Rozenberg*

11. Dynamical Mean-Field Theory for Materials
    *Eva Pavarini*

    *Robert Eder*

13. Introduction to Many-Body Green Functions In and Out Of Equilibrium
    *James Freericks*

    *Andrea Donarini*

15. Diagrammatic Monte Carlo
    *Nikolay Prokof’ev*

16. Stochastic Series Expansion Methods
    *Anders Sandvik*

17. Algebraic Methods in Many-Body Physics
    *Gerardo Ortiz*

**Index**
