## Table of Contents

2.7 Technical aspects of the KKR codes and new implementations  
   2.7.1 KKR codes available in Jülich  
   2.7.2 New implementations in the KKR-impurity and KKR-susc codes

3 Scattering of Rashba electrons off magnetic impurities  
   3.1 Rashba Hamiltonian  
   3.2 Rashba Green function  
   3.3 Transition matrix  
   3.4 Friedel oscillations  
      3.4.1 Friedel oscillations in the induced charge density  
      3.4.2 Friedel oscillations in the induced spin magnetization density  
   3.5 Interactions among magnetic impurities deposited on a Rashba electron gas  
      3.5.1 Extended Heisenberg model  
      3.5.2 Mapping procedure  
   3.6 Magnetic properties of dimers  
      3.6.1 RKKY-approximation  
      3.6.2 Beyond the RKKY-approximation  
      3.6.3 Connecting the different parts of the exchange interaction tensor  
      3.6.4 Magnetic configurations of dimers  
   3.7 Magnetic properties of complex nanostructures  
      3.7.1 Magnetism of linear chains  
      3.7.2 Trimer  
      3.7.3 Hexagon  
      3.7.4 Heptamer  
   3.8 Transport properties of Rashba electrons  
      3.8.1 Scattering States  
      3.8.2 Cylindrical expansion of the Green function and the t-matrix  
      3.8.3 Residual resistivity tensor from linear response theory  
      3.8.4 Resistivity tensor in absence of the spin-orbit interaction  
      3.8.5 Residual resistivity tensor within the s-wave approximation  
      3.8.6 Residual resistivity tensor results and discussions  
   3.9 Orbital magnetization in a Rashba electron gas  
      3.9.1 Rashba spin-orbit interaction as a vector field  
      3.9.2 Ground state charge current induced by a single magnetic impurity on a Rashba electron gas  
      3.9.3 Orbital magnetization of magnetic impurities on a Rashba electron gas from ground state charge currents  
      3.9.4 Orbital magnetization of a single adatom on a Rashba electron  
      3.9.5 Orbital magnetization of a dimer on a Rashba electron gas from ground state charge currents  
      3.9.6 Orbital magnetization of trimer on a Rashba electron gas from ground state charge currents  
   3.10 From Rashba surface states to topological insulators  
   3.11 Summary and outlook
4 Magnetic impurities in topological insulators
4.1 Introduction to topological insulators .................................. 108
4.2 Bi₂Te₃ and Bi₂Se₃ as prototypical topological insulators .......... 113
4.3 Ground state properties of 3d and 4d magnetic impurities embedded in 
Bi₂Te₃ and Bi₂Se₃ ......................................................... 115
4.3.1 3d magnetic impurities embedded in Bi₂Te₃ surface .......... 117
4.3.2 4d magnetic impurities embedded in Bi₂Te₃ surface ........ 120
4.3.3 3d and 4d magnetic impurities embedded in Bi₂Se₃ surface .. 122
4.4 Investigating the in-gap states .......................................... 123
4.5 Anderson model for the in-gap states ................................. 124
4.6 Magnetocrystalline anisotropy ........................................... 129
4.6.1 Magnetocrystalline anisotropy for 3d and 4d impurities in Bi₂Te₃ 130
4.6.2 Magnetocrystalline anisotropy and real space cluster size .... 134
4.6.3 Magnetocrystalline anisotropy for 3d and 4d impurities in Bi₂Se₃ 137
4.6.4 Magnetocrystalline anisotropy for 3d and 4d impurities in bulk 
Bi₂Te₃ ................................................................. 137
4.7 Spin dynamics of 3d and 4d impurities in topological insulators ... 140
4.7.1 Transversal dynamical response ................................... 142
4.7.2 Spin excitations of 3d impurities in Bi₂Te₃ ...................... 142
4.7.3 Spin excitations of 4d impurities in Bi₂Te₃ ...................... 144
4.7.4 Spin excitations of 3d and 4d impurities in Bi₂Se₃ ............. 147
4.7.5 Impact of the surface state on spin excitations of 3d and 4d impu-
rities in Bi₂Te₃ .......................................................... 149
4.7.6 Transversal zero-point spin-fluctuations of 3d and 4d impurities in 
Bi₂Te₃ and Bi₂Se₃ ....................................................... 149
4.7.7 Renormalization of the MAE from the ZPSF ................. 153
4.8 Summary and outlook ...................................................... 154
5 Magnetic Skyrmions ......................................................... 157
5.1 Introduction to magnetic Skyrmions .................................. 158
5.2 Magnetic Skyrmions in Pd/Fe/Ir(111) .............................. 159
5.3 Tunneling spin-mixing magnetoresistance ........................... 159
5.3.1 TXMR from multiple scattering theory ......................... 162
5.3.2 TXMR in the Alexander-Anderson model ...................... 164
5.4 Chiral orbital magnetization ............................................ 165
5.4.1 Chiral orbital magnetization in Pd/Fe/Ir(111) ............... 166
5.4.2 Connection between TOM and topological charge .......... 170
5.5 Summary and outlook ...................................................... 171
6 Conclusions ........................................................................ 173
A Derivation of the t-matrix in the s-wave approximation .......... 177
B Extended Heisenberg model for a magnetic dimer .................. 179
C Asymptotic expansion of the Rashba Green function .............. 181
Table of Contents

D Evaluation of the momentum operator matrix elements 183
E Phenomenological derivation of the functional forms 185
F Derivation of the current operator 189
